

Mobile Application Development and Transition

Mobility Transition

Mobility Approach

Approach Highlights

Tablet and Phone Ready

Quick, simple approach to make the application available across multiple smart phone platforms and form factors.

Code Re-use

Reuse existing modules (Login and session management, etc.) from other applications to reduce development costs.

Legacy Application Mobile Extension

Extend legacy application code to build the mobile middleware layer, leading lower capital and operational costs.

Standard Development Tools

Using cost framework from other mobile applications built by Salient CRGT provides consistency and operational efficiency.

Lower Project Onboarding

An experienced legacy mobilization development team reduces ramp-up and delivery times.

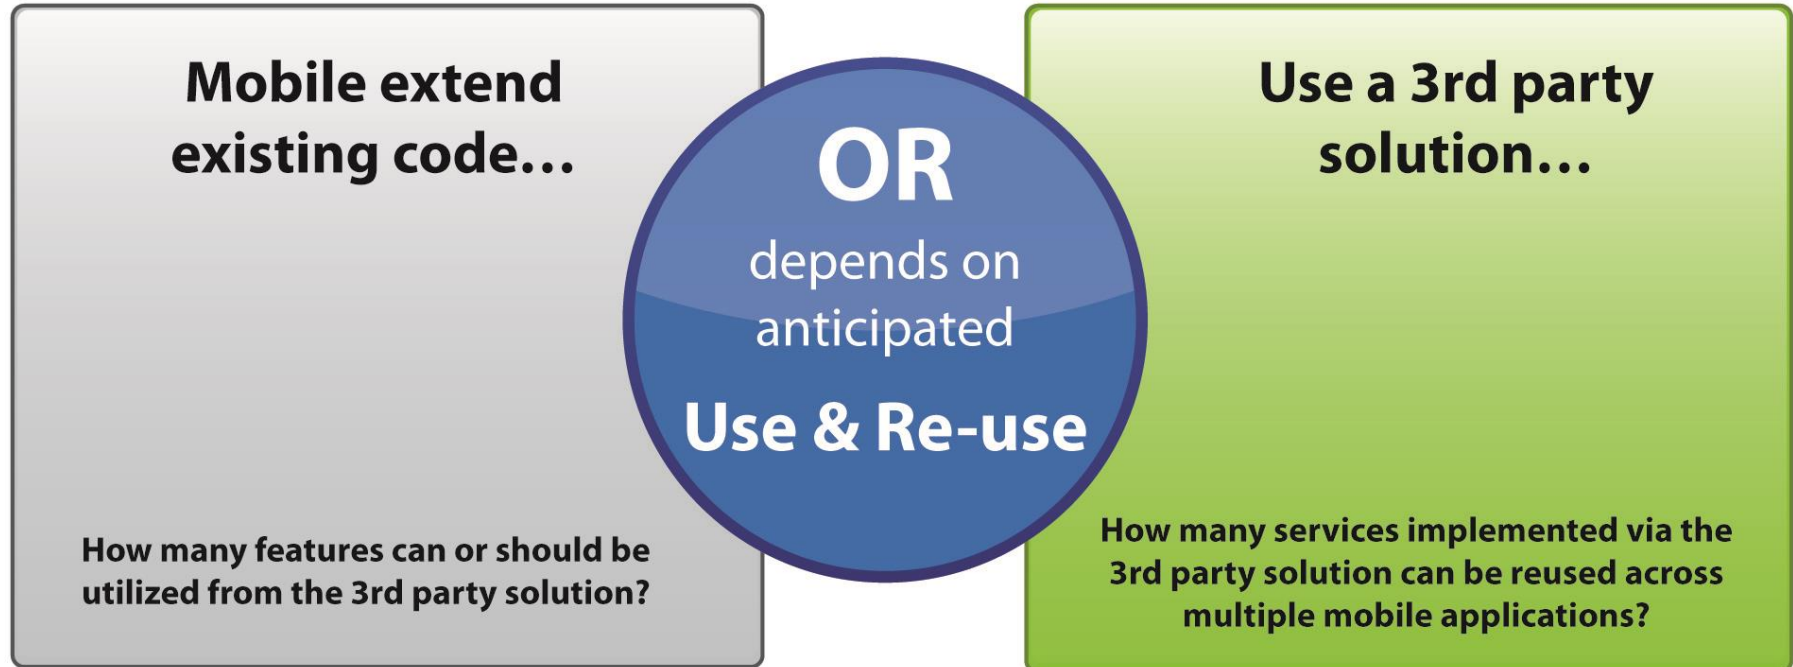

Mobile First Advantage

Designing applications to initially work on mobile devices permits easier leveraging of the application across various platforms and devices.

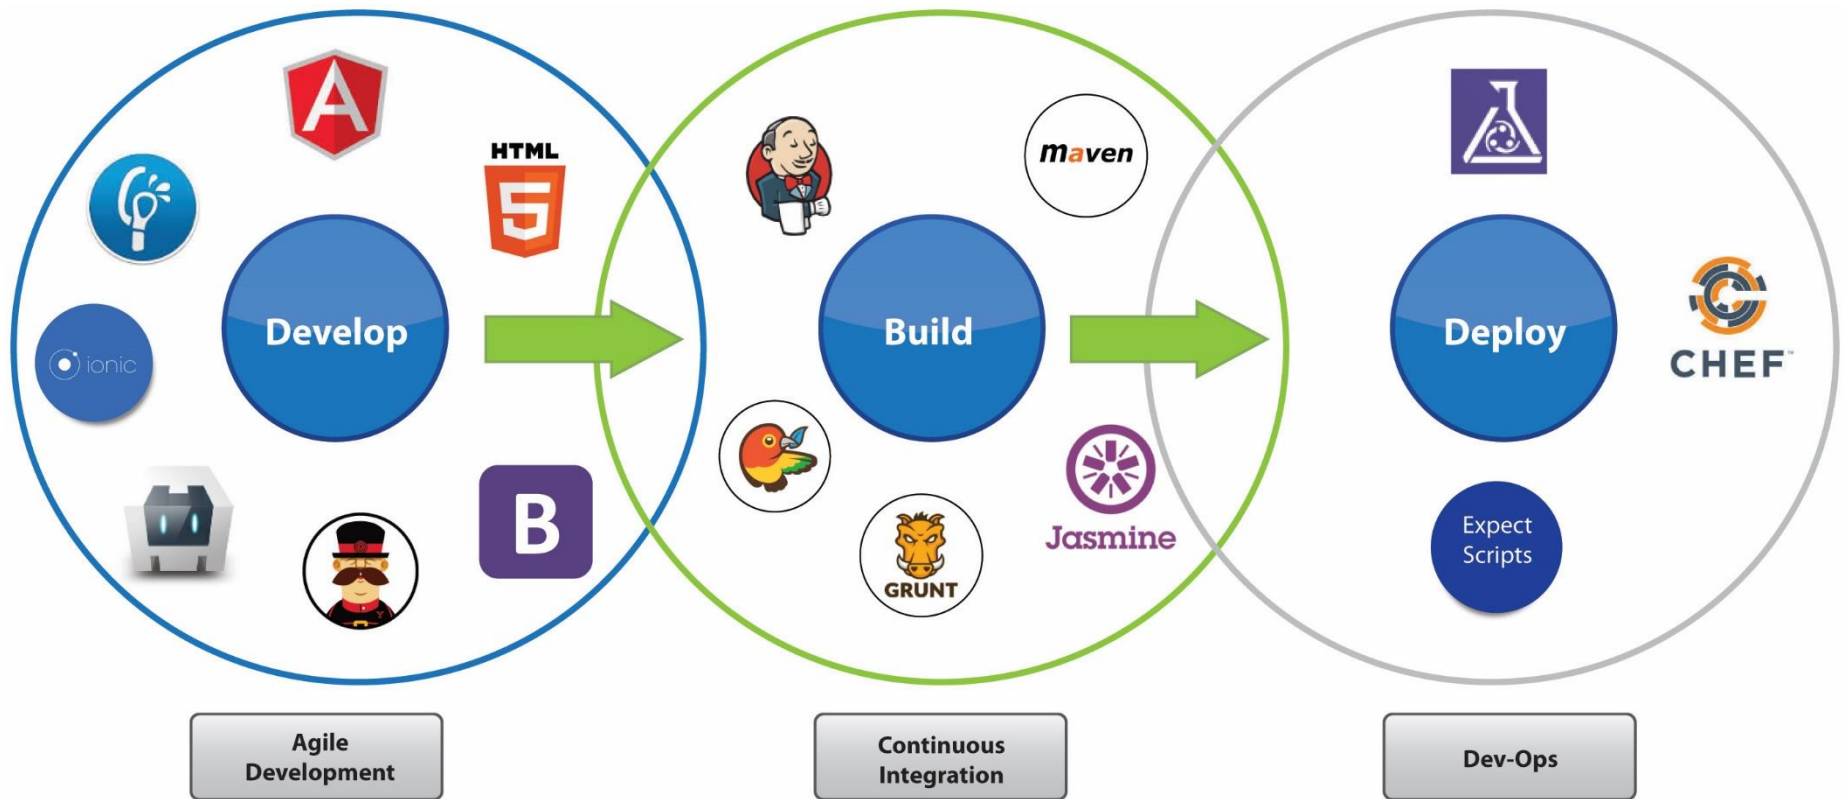

Typical Decision Path

Mobile Middleware Decision Path
