Information Governance: Building Your Strategy and Roadmap

Does Your Agency Have These Problems?
- Your business users are using self-service analytics technologies but it has become the Wild Wild West!
- The big boss is getting reports without any validation.
- Your Director has no way of knowing if data is accurate or current.
- Departments are reporting performance metrics that conflict.
- Data, reports, or dashboards end up in the hands of the wrong person.
- Business and IT lacks the appropriate partnership.
- Governance is seen as having little ROI.

What is the Solution?
Develop and execute an Information Governance Strategy! Information Governance sets decision rights and accountability to ensure appropriate behavior in the valuation, creation, storage, and use of information. Information Governance includes the processes, roles and policies, standards and metrics that ensure the effective and efficient use of information in enabling an organization to achieve its goals.

Our Offering
In three short weeks, Salient CRGT provides an information governance strategy and prioritized roadmap tailored to your agency. Our team also builds a detailed plan for the first phase of the roadmap to set you on the road to success!

1. Discover  
2. Define Information Governance Operational Model  
3. Create Roadmap

For Tableau customers, Salient CRGT has a Tableau Governance Quick-Start Guide that guides agencies in leveraging the Tableau Desktop and Server products.
Our Approach
After helping dozens of government agencies with data and analytics, Salient CRGT developed an Information Governance Reference Operational Model. This model serves as a foundation to analyze and recommend a strategy with regards to people’s roles, responsibility, organization, processes, and technology. We collaborate with executives, managers, data stewards, and end users to understand business goals, strategies and challenges. We analyze gaps between current and future state, define gap implications, discuss alternatives, recommend best practices, and build a strategy and roadmap to drive towards enterprise information governance success. Finally, we sequence activities and milestones, and then organize them into an executable roadmap.

Our Information Governance Services in Action

U.S. Navy
Salient CRGT created an enterprise data strategy for the U.S. Navy that included information governance, data management, and data transformation, and defined business led processes for analytics for Manpower, Personnel, Training, and Education enterprise including over 300,000 sailors.

National Science Foundation (NSF)
Salient CRGT addressed the NSF’s strategic need to empower business users, while simultaneously controlling access and data standards, by defining the enterprise data governance program’s structure, strategy, and plan.

U.S. Nuclear Regulatory Commission (NRC)
Salient CRGT developed an Enterprise Data Management System including a data quality system, data stewardship business processes, and master data management system for docket, employee, and contractor records for the U.S. NRC.

About Salient CRGT
Salient CRGT is a leading provider of data analytics, health, cloud, and Agile software development primarily to federal civilian, defense, and intelligence agencies. With active data analytics engagements at over 20 government agencies, Salient CRGT is one of the largest big data, data warehousing, business intelligence, advanced analytics, data management, and information governance services providers to the federal government.
