

VOYAGER

eDOC

*Real-time situational awareness with precise
officer locations inside your facilities.*

 SalientCRGT

Observe. Recognize. Notify.

Voyager eDOC Takes Situational Awareness to a Whole New Level

Not only does the application include a 360° view of all activity on an edge-to-edge map display, it also provides precise in-building location sharing. Users locations are displayed within the building footprint, exactly where they are located, making it possible to make critical decisions quickly and effectively. Virtual action zones within the building can be used to trigger system notifications, or used to satisfy other actions such as a location specific automatic check-in.

Voyager eDOC Benefits

- ▶ In building location positioning
- ▶ Automatic switching from street map to building floorplan on user entry
- ▶ Virtual action zones
- ▶ Flexible architecture – hosted or on-premise implementations
- ▶ Integrated with Voyager CommandTRACKER and other GPS / data solutions
- ▶ More responsive and cost-efficient operations
- ▶ Reduced organizational liability
- ▶ Real-time communication between devices
- ▶ 360° situational awareness
- ▶ Command Center situational awareness at the mission edge
- ▶ Works on Android & iOS
